SAPLING MAINTENANCE

@Pondicherry University - Phase II

We are a team of likeminded Volunteers and member of Chennai trekking Club. We believe that we do not inherit this earth from our ancestors, we borrow it from our children!! We don't see oxygen parlors as viable alternatives for our trees. We believe that conservation is not someone else's responsibility and we understand that societal participation is necessary for anything that results in something that's good!!!

Want to experience the joy of standing in the shade of a tree which you planted?

Want to experience that pride of having done something good for the society??

What is our Plan?

We are now in the maintenance phase-to ensure survival of several saplings planted!! Critical care is necessary to help our saplings see through this harsh summer!! So we are going to remove the weeds around our saplings, Manuring, Pruning, Mulching
